

Welcome to Vibe Coding!

Your 4-session journey to building and shipping a real AI-powered app starts here.
Here's everything you need to do before Day 1.

4 Sessions

Live via Zoom

2 Hours Each

BEFORE CLASS

Setup Checklist — Do This Before Day 1

Complete all steps below before your first class. Click the buttons to go to each download page directly.

1

Install Python 3.12
Download Python for your computer (Windows or Mac). During installation, make sure to tick **"Add Python to PATH"** — this is important!
[python.org/downloads](#)

2

Install VS Code (Visual Studio Code)
This is the code editor we'll use in every class. It's free and works on Windows, Mac, and Linux.
[code.visualstudio.com/download](#)

3

Create a Claude.ai Account **PRO REQUIRED**
This is the AI assistant we use every session, starting Day 1 — for planning, coding, and later, Claude Code. Please sign up for **at least the Pro plan (\$20/month)** before class — Claude Code and Claude Cowork both need a paid plan, and the free tier's usage limits run out fast once you're building for real. Max also works if you want more headroom.
[claude.ai](#) [claude.ai/upgrade — Get Pro](#)

4

Create a GitHub Account
GitHub is where you'll store and show off your code projects. It's free — see the full setup guide in the next section below.
[github.com/signup](#)

5

Test Your Setup
Open VS Code → go to Terminal menu → New Terminal → type `python --version` and press Enter. You should see Python 3.12.x. If you do, you're ready! 🥳

6

Make Sure Zoom Works
Test your camera and microphone before class. We'll send you the Zoom link 1 day before the first session. Camera must be ON during all classes.

GITHUB SETUP

How to Create a GitHub Account

GitHub is like Google Drive — but for your code. Follow these 5 steps.

GitHub stores every project you build so you can share it with employers or friends. By the end of Session 4, your Science Toolkit app will be live on GitHub **and** deployed to the internet — even as a beginner, this impresses employers. It's free and takes about 3 minutes to set up.

1

Go to github.com and click "Sign up"
Open your browser → go to [github.com/signup](#) → click the green Sign up button.

2

Enter your email, password, and username
Choose a username using your real name (e.g. `sarahlee` or `alifarhan`). Employers will see this, so keep it professional.

3

Verify your email address
GitHub will send a verification code to your email. Check your inbox (and spam folder), then enter the code to confirm your account.

4

Choose the Free plan
When asked to choose a plan, select Free. It includes everything you need for this course. No credit card required.

5

Done! Send your GitHub username to your instructor
WhatsApp your username to +60 113 165 2854. We'll create your first repo together, live, in Session 1.

💡 **Why GitHub matters:** by the end of this course, your Science Toolkit project will be live on GitHub, deployed to a real URL. You can share the link with any employer to prove your skills — even as a beginner. This is your coding portfolio and it stays with you forever.

CURRICULUM

What You Will Learn — 4 Sessions

Two hours per session on Zoom. Every session builds on the last.

SESSION 1

AI Tools, GitHub & Python Basics

- Claude, ChatGPT & Gemini — what each is best for
- Tokens, sessions & Claude Chat vs. Cowork vs. Code
- Your first GitHub repo & commit

SESSION 2

AI Skills & Agents

- What's a Skill vs. an Agent, really
- Anatomy of a SKILL.md file
- Design your own agent workflow

SESSION 3

Frontend Implementation

- HTML, CSS & JS — what each one does
- Choosing your UI/UX, colors & theme
- Push your frontend to GitHub

SESSION 4

Backend Engineering

- Databases, Flask & choosing a stack
- Hosting vs. domains, explained
- Deploy your app live on Railway

CLASS RULES

What to Expect in Every Session

A few simple rules to make sure everyone gets the most out of class.

**CAMERA**
Camera must be ON throughout every session — no exceptions.

**PUNCTUAL**
Join 5 minutes early — class starts exactly on time.

**HOMEWORK**
Complete each session's build task before the next one.

**QUESTIONS**
Ask anytime — no question is too basic. We're here for you!

GET IN TOUCH

Contact Your Instructor

Reach out any time — we're happy to help before, during, or after class.
